

JANUARY

🦋 Penguins are ancient birds. An ancestor of today's penguins lived at the same time as the dinosaurs.

🦋 Even though they don't have ears that we can see, penguins have excellent hearing.

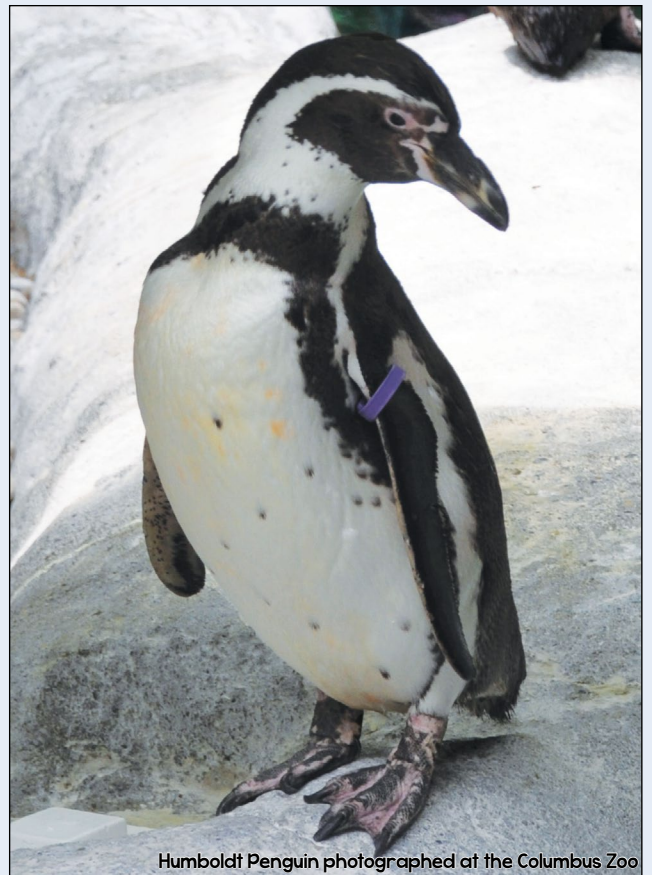

🦋 Penguins waddle when they walk because they have short, little legs and big feet.

🦋 Penguins spend most of their time underwater. They can hold their breath for a very long time.

🦋 To dive deep and swim fast when they're underwater, penguins flap their wings and look like they're flying.

🦋 A group of penguins in the water is called a 'raft.' When on land, they're called a 'waddle.'
